EDUCATION

Paris Dauphine University - PSL

MSc in Financial Engineering – Quantitative Finance Track (Program 272)

Paris, France

Sep 2025 – Jun 2026

- Coursework: Stochastic Calculus, Derivatives Pricing, Volatility Modeling, Portfolio Theory, Algorithmic Trading, Time Series.

EPF Graduate School of Engineering

Master in Computer Science – Data & ML Track – Rank: 8/157

Paris, France

Sep 2020 – Jun 2025

- Coursework: Probability, Statistics, Linear Algebra, Numerical Optimization, Algorithms & Data Structures, Machine Learning.

PROFESSIONAL EXPERIENCE

MYR - Private Investment Fund

Quantitative Researcher

Montpellier, France

Aug 2024 – Jul 2025

Contributed to quantitative research, market analysis and trading system monitoring within an active market maker on Hyperliquid.

- Researched short-horizon market signals across 12 liquid crypto markets using L1/L2/L3 order book data, microprice, imbalance and execution metrics.
- Analyzed multi-year tick-level and high-frequency datasets to study order book dynamics, fill behavior, adverse selection and short-term price reactions.
- Built Python tools using APIs and WebSocket feeds to monitor positions, hedging activity, trading volume, PnL, execution quality, market deviations, risk and live strategy performance in real time.

La Valériane - Investment Branch

Quantitative Developer

Montpellier, France

Sep 2023 – Jan 2024

Built a cross-exchange arbitrage strategy between Binance and dYdX, from data collection to backtesting, execution and monitoring.

- Reconstructed one year of tick-level and L1/L2 order book data to analyze spreads, liquidity conditions and trading frictions.
- Developed and backtested arbitrage signals using price deviations and order book data, with slippage, execution costs and realistic entry/exit rules.
- Ran the strategy on a 24/7 server with Python monitoring scripts tracking market conditions, bot activity and execution quality.

PROJECTS & COMPETITIONS

IMC Trading – Prosperity 4 Algorithmic Trading Competition

Apr 2026 – May 2026

- Built Python tools for backtesting, diagnostics, signal analysis and multi-round systematic trading research across market-making, cross-product relative value and volatility-driven strategies.
- Algorithmic rankings: Round 1 – #77 worldwide, #1 in France; Final – #514 worldwide, #17 in France, among ~20,000 teams.

Real-Time Market Data & Market Making Engine

Apr 2026

- Built a Python and Streamlit market-making simulator using Binance WebSocket data, with live order book visualization, microprice and queue-aware quoting, markout analytics, volatility controls and P&L tracking.

Monte Carlo Option Pricing Engine

Jan 2026 – Mar 2026

- Built a Python pricing engine for European and American options using Monte Carlo simulation, Longstaff–Schwartz regression, antithetic variates, CRN-based Greeks and Black–Scholes/trinomial tree benchmarks.

Market Data Aggregation & Paper Trading API

Feb 2026 – Mar 2026

- Built a Python trading API with WebSocket market data aggregation, normalized real-time streams, paper trading, strategy execution and simulated order management.

SKILLS

Computing: Python, C++, SQL, NumPy, Pandas, SciPy, Statsmodels, Scikit-learn, PyTorch.

Tools: Git, Docker, Linux, Streamlit.

Languages: French (Native), English (Fluent), Spanish (Intermediate).

Entrepreneurship: Founded MASSEEO, a white-label electrostimulation brand generating several thousand euros in revenue.

Interests: Competitive tennis (regional team champion), alpine skiing.
